EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Cheng-Kang Hsu on 08/20/2008.

The application has been amended as follows:

Claim 1: A livestock brushing device for brushing livestock,
comprising:

a livestock brush having a substantially oblong cross section and adapted to be set in motion by a driving mechanism, said oblong livestock brush having a shaft and brush hairs projecting substantially radially therefrom when the oblong livestock brush is not being driven by the driving mechanism ; and

a carrier located above the livestock brush, said carrier supporting the livestock brush, the carrier including: at least one flexible element, wherein in the absence of a force other than gravity acting externally upon the livestock brush, the livestock brush has a substantially vertical orientation for brushing external sides of an animal, and

wherein the at least one flexible element of the carrier is structured to allow, in response to a force other than gravity acting externally upon the livestock brush,

a swiveling of the livestock brush to a substantially horizontal orientation for brushing against the back and higher-up external surfaces of the animal.

Claim 13: A livestock brushing device for brushing livestock, comprising:

a driving means mechanism;

a livestock brush having a substantially oblong cross section and adapted to be set in motion by the driving means mechanism, said livestock brush having a shaft and brush hairs projecting substantially radially therefrom when the livestock brush is not being driven by the driving mechanism; and

a carrier for supporting the livestock brush and the driving means mechanism, the carrier including:

a rigid frame and at least one flexible element, said at least one flexible element being fixed at one end directly to a rigid, non-movable structure and being connected at an opposite end to said rigid frame, said driving means mechanism having a lower end directly mounted on said rigid frame, wherein in the absence of a force other than gravity acting externally upon the livestock brush, the livestock brush has a substantially vertical orientation for brushing external sides of an animal, and wherein the at least one flexible element of the carrier, through a force other than gravity acting externally thereupon, permits a swiveling of the livestock brush to a substantially horizontal orientation of said livestock brush for reaching the back and higher-up external surfaces of the animal.

Claim 15: A livestock brushing device for brushing livestock, comprising:

- a driving means mechanism;
- a livestock brush having a substantially oblong cross section and adapted to be set in motion by the driving means mechanism, said livestock brush having a shaft and brush hairs projecting substantially radially therefrom when the livestock brush is not being driven by the driving mechanism; and
- a carrier for supporting the livestock brush, the carrier including at least one flexible element, wherein in the absence of a force other than gravity acting externally upon the livestock brush, the livestock brush has a substantially vertical orientation for brushing external sides of an animal, wherein the at least one flexible element of the carrier has a structure that allows, through a force other than gravity acting externally thereupon, a swiveling of the livestock brush to a substantially horizontal orientation of said livestock brush for reaching the back and higher-up external surfaces of the animal, wherein one end of the driving means faces the livestock brush and an opposite end of the driving means is exposed, and wherein the oblong livestock brush of the brushing device consists of a single livestock brush.

2. The following is an examiner's statement of reasons for allowance: the prior art fails to disclose a livestock brush with a substantially vertical orientation having a flexible element that is structured to allow, in response to a force other than gravity, the brush to swivel to a substantially horizontal orientation for brushing the back and higher up surfaces of an animal.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
